

Task 4: Build a Simple Multi-Page Website

Tools:

- Primary: VS Code, Browser DevTools
- Alternatives: CodePen, StackBlitz

Hints / Mini Guide:

1. Create multiple HTML files such as home.html, about.html, contact.html.
2. Ensure consistent structure and navigation across all pages.
3. Use relative paths to link pages correctly.
4. Reuse CSS styles across all pages by linking the same stylesheet.
5. Highlight the active navigation link using CSS.
6. Maintain consistent layout and footer across pages.
7. Test page navigation thoroughly.
8. Organize files into folders for scalability.

Deliverables:

- Functional multi-page website
- Proper navigation system

Interview Questions Related To Above Task:

- What are relative paths?
- How do you maintain consistency across pages?
- Difference between single-page and multi-page websites?
- What causes broken links?
- Why is folder structure important?

Task Submission Guidelines

-  **Time Window:**

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at 10:00 PM.

-  **Self-Research Allowed:**

You are free to explore, Google, or refer to tutorials to understand concepts and complete the task effectively.

-  **Debug Yourself:**

Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

-  **No Paid Tools:**

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

-  **GitHub Submission:**

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

Submit Here:

After completing the task, paste your GitHub repo link and submit it using the link below:
